# Key Data Summary

From 2012 Onward

## Data Types

- Open Medical Claims
- Closed Medical Claims and Enrollment
- Traditional Pharmacy
- Specialty Pharmacy
- Remittance

## Data Coverage

- Medical Lives: 70-75% of the US population
- Pharmacy Lives: 60-65% of the US population
- Specialty Pharmacy 30-35% of the market
- Patient Level SDoH data on 70% of the US population
- Patients: De-ID: 330M
- Covered Lives: 199M
- Master Death Files on 36M lives
- HCPs: 2.3m active providers

## Sources by Type

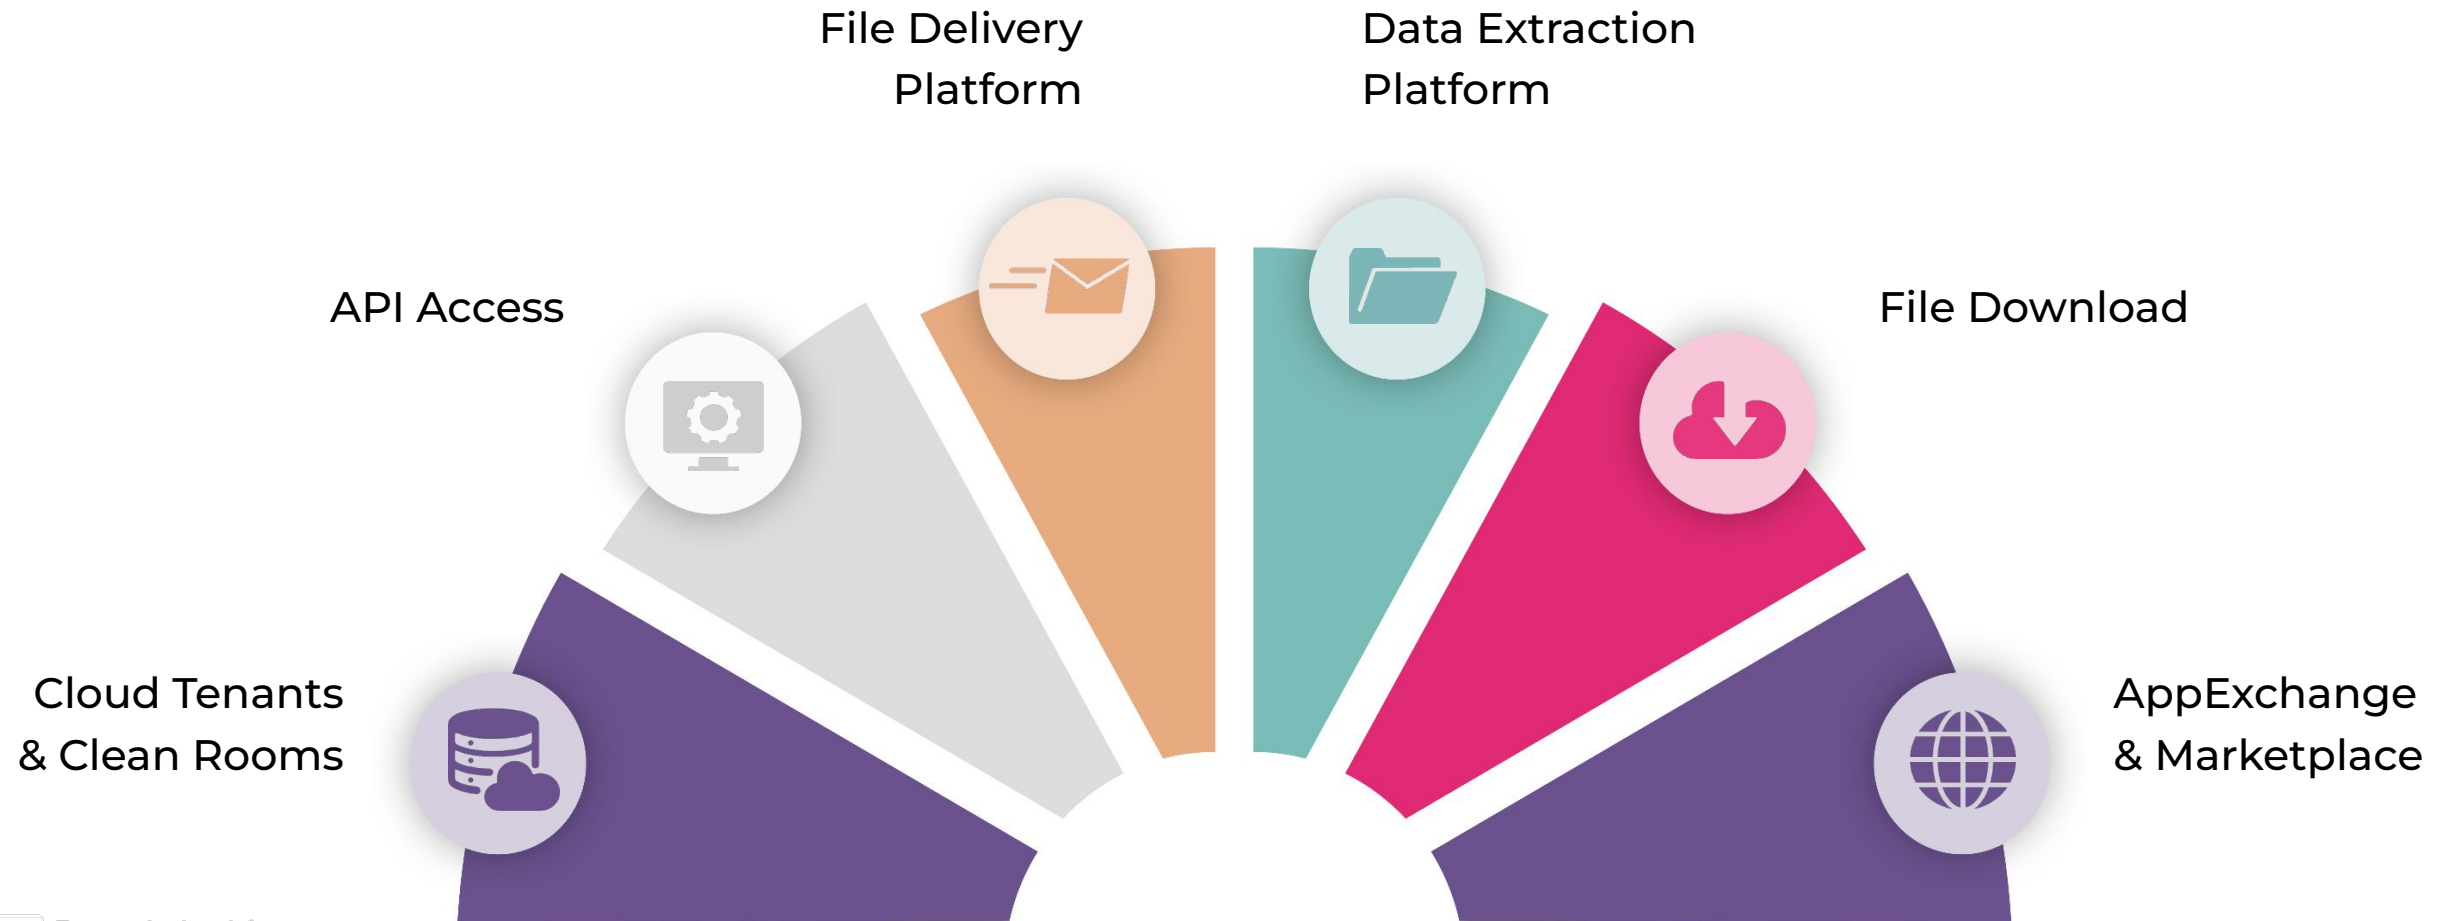

- Switches / Clearing Houses
- Payers
- Revenue Cycle Management
- Pharmacy Benefit Management companies
- CMS Qualified Entity (all 50 states)
- Healthcare Information Technology (HCIT) vendors

## Sources

- Open Sources
- Closed Sources

# Flexible Distribution

# [SDOH] Attributes

Sourced from four distinct PII sources that are de-identified and linked back to our HIPAA compliant patient data warehouse. SDOH attributes are mapped to additional data points including age, gender, zip3, state, and mortality.

Race

Disability

Ethnicity

Occupation

Education

Marital Status

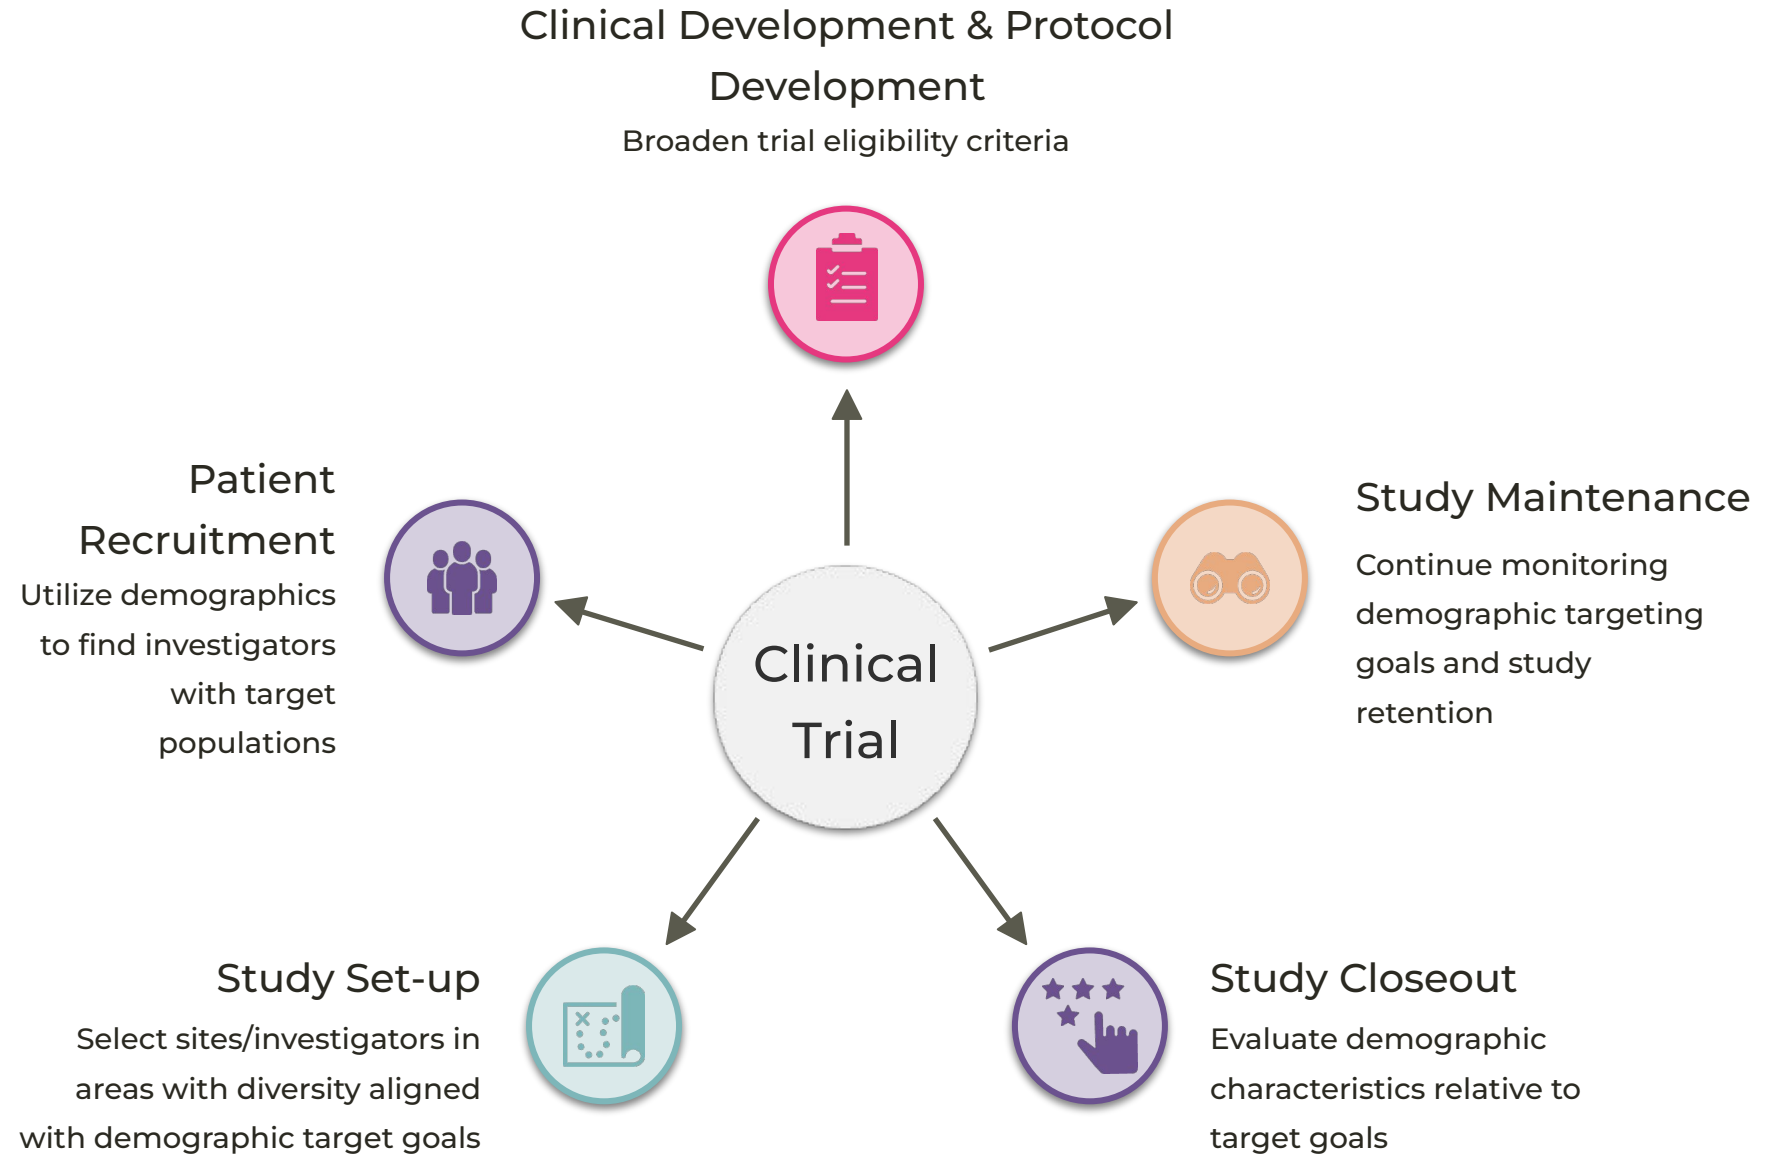

Income

Urban / Rural

## HealthNexus Provides Robust SDOH Reporting Capabilities

# How PurpleLab Supports DEI

Patient level SDOH  
attributes

# Leveraging PurpleLab RWD to Accelerate [Clinical Trials]

Utilize **CLEAR Claims** to understand market opportunities and gaps in today's therapies to differentiate your assets and endpoints.

Using our **NPI to Hierarchy, Provider Profiling, and CLEAR Claims**. Analyze how your protocol works with real patients and sites, set yourself up for success before starting site selection.

Using our **Investigator Alerts** select sites with large amounts of protocol matched patients.

Utilize our **clinical trials data** to find Sites that have investigators with the experience.

Our **Patient social determinants of health (SDOH)** to inform your study design and recruitment

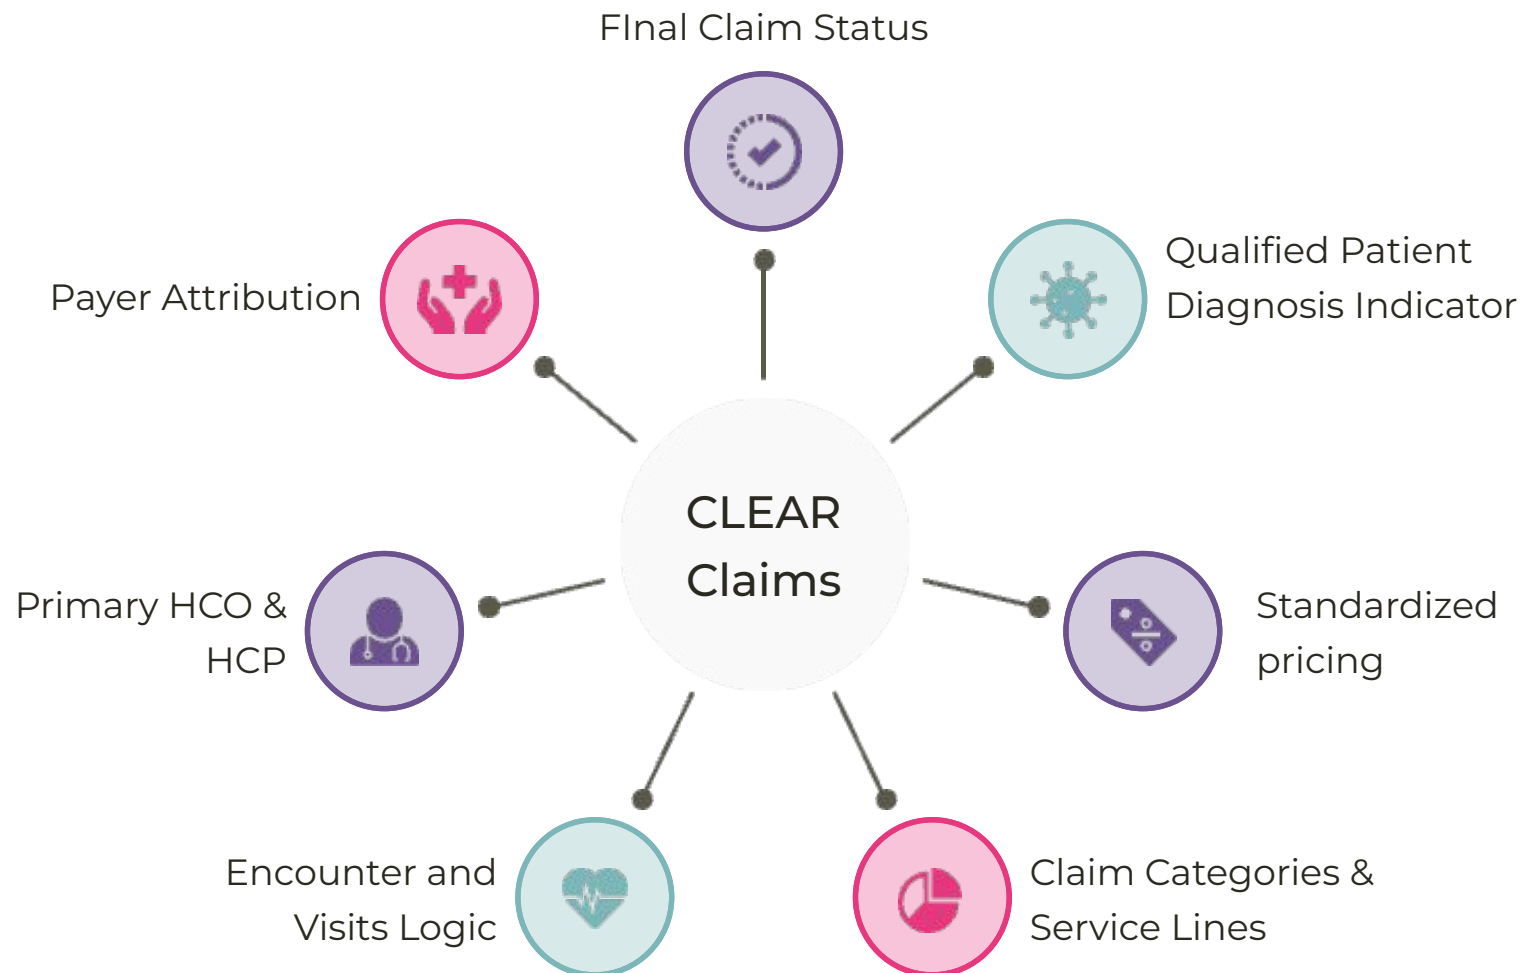

Using our **Investigator Alerts** by finding investigators with more protocol matched patients

# [CLEAR Claims]

Purple Lab's Comprehensive Layout for Exploration, Analysis, & Research (CLEAR) claims enhances our claims data warehouse with additional fields and clinically approved methodologies that facilitate analysis

- CLEAR reduces the amount of data engineering needed to use claims data.
- Complete deduplicated data sets aggregated together in a one data set
- Available via Cohort Puller

# Core **Life Science** CLEAR Claims Methodologies

## Primary HCP/HCO Identification

Identifies who the primary HCP and HCO are on each claim

## Final Claims Status

Identification of all claim resubmissions of the same service and which claim is the most recent version

## Qualified Patient Diagnosis Indicator

Quickly identify and analyze the right patients based on evaluated diagnosis providing a more precise population for study or targeting

# Additional CLEAR Claims Methodologies

## Claim Category & Service Lines

Identify urgent care, telehealth, outpatient surgery, maternal health, lab, home health & more

## Payer Attribution

Identification of the primary payer and sub channels

## Standardized Pricing

Proprietary standardized pricing mode based on current CMS Fee Schedules

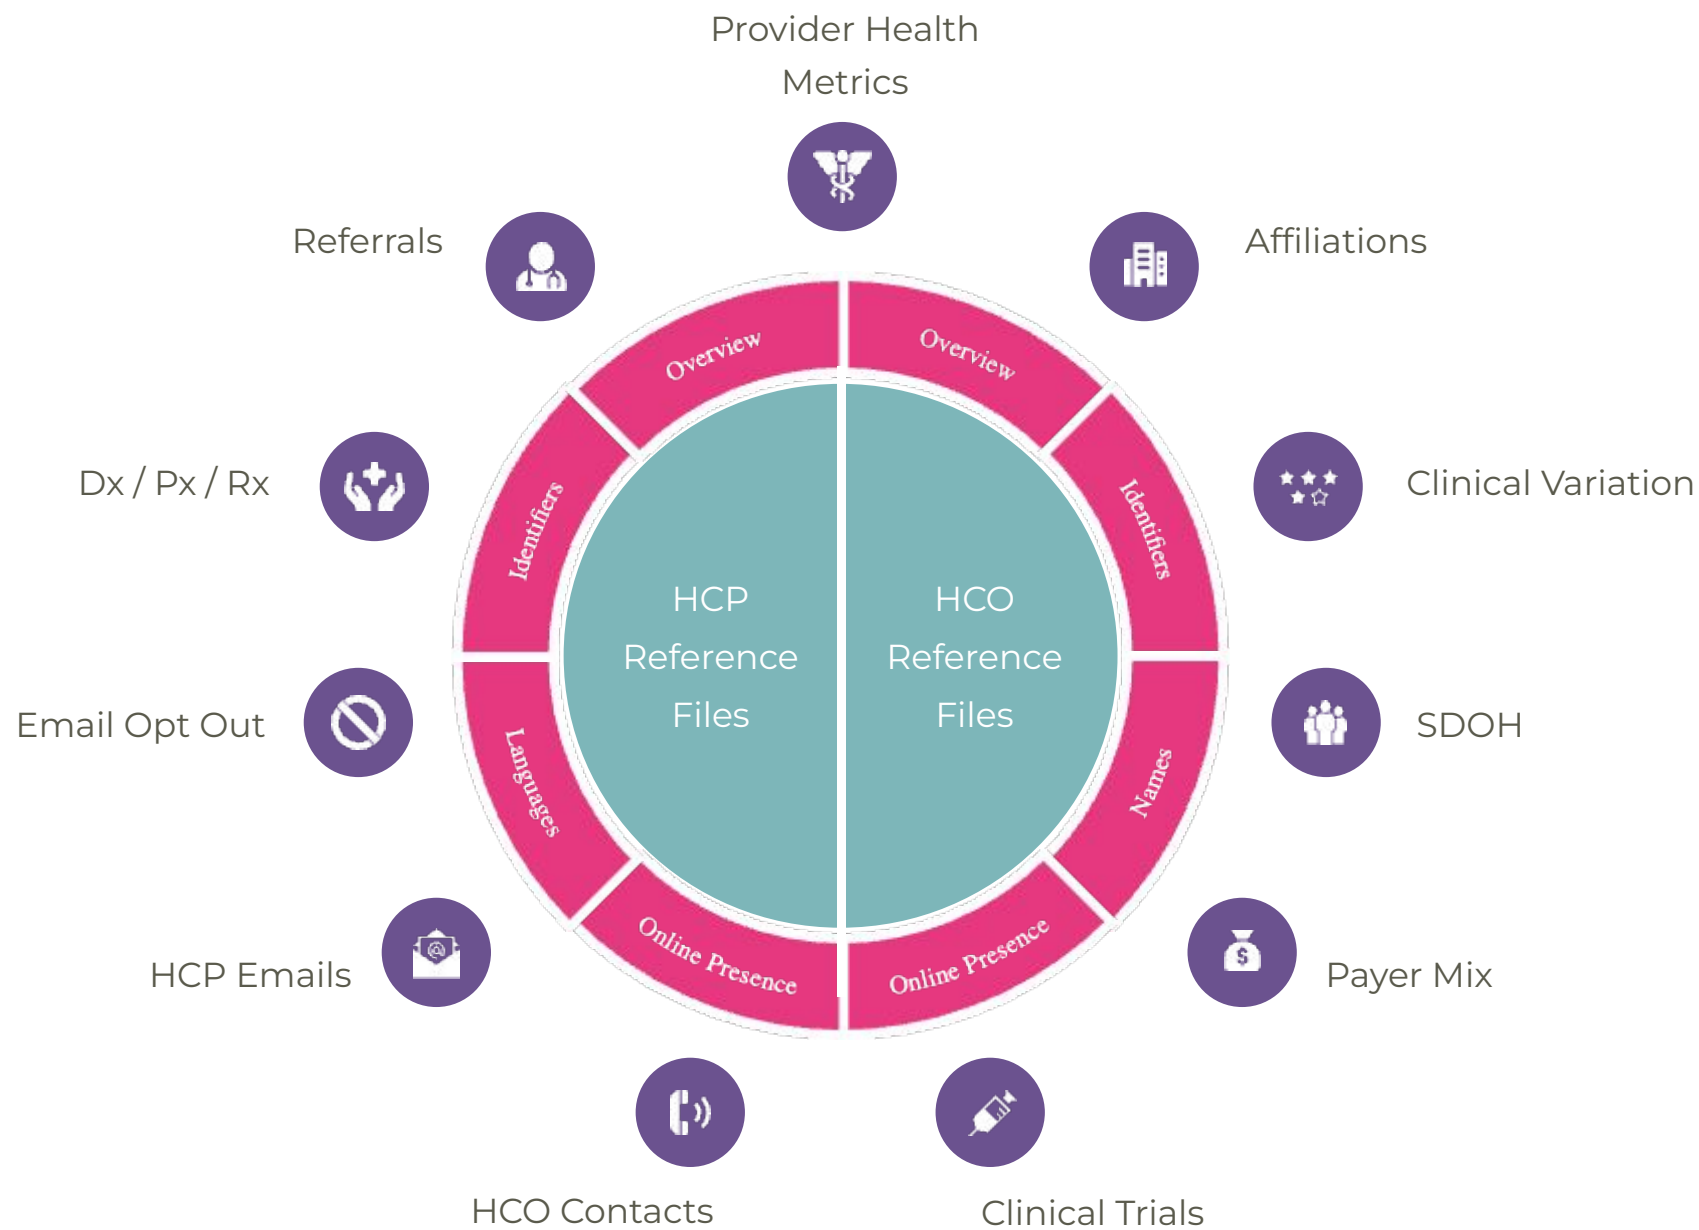

## Encounter and Visits Logic

Classify the encounters by location and define these by admission or visits linked to a specific DRG. Identify all claims associated with a visit or admission.

# HealthNexus: Real-World Use Cases

## Post-Market Surveillance and Safety Monitoring

**Scenario:** A medical device manufacturer needs to monitor the long-term safety and effectiveness of their product in the real world.

**Use Case:** HealthNexus supports the manufacturer in analyzing real-world data on product performance and safety, enabling timely identification of potential issues and supporting regulatory compliance. This proactive monitoring aids ongoing product improvements and risk management.

## Clinical Trial Design and Optimization

**Scenario:** A pharmaceutical company is planning a clinical trial for a new cancer treatment. The company needs to identify the ideal patient population for recruitment.

**Use Case:** HealthNexus helps the company by enabling them to align trial requirements with real-world data reports, leading to an informed study design. By leveraging this data, HealthNexus aids in refining inclusion criteria and endpoints, thereby optimizing patient recruitment. Additionally, trial efficiency is enhanced by addressing potential challenges proactively.

## Regulatory Submission and Evidence Generation

**Scenario:** A biotech firm is preparing a regulatory submission for a new drug and needs to include real-world evidence to support efficacy and safety claims.

**Use Case:** HealthNexus facilitates this process by enabling the firm to generate customized reports that align with the specific regulatory requirements and present a comprehensive real-world data visualization of the drug's performance.

## Analysis of Disease Burden

**Scenario:** A public health agency aims to assess the burden of diabetes within a specific region to guide targeted health interventions.

**Use Case:** HealthNexus assists the agency by aggregating and analyzing real-world data on diabetes incidence, prevalence, and patient outcomes. Detailed report results provide insights into disease impact, helping the agency make informed decisions on policy development, allocate resources effectively, and design targeted public health campaigns to manage and mitigate the disease's effects.
